RE: Site Management Activity Completed, Earth Waste Systems, Inc.,
Colchester, Vermont (site #97-2271)

Dear Mr. Elnicki:

The Vermont Department of Environmental Conservation, Sites Management Section (SMS) has received and reviewed the Heindel and Noyes (H&N) report dated February 20, 1998 concerning the above referenced site. Based on the current conditions at this site and the results of the H&N report, the SMS has determined that this site meets the Waste Management Division's Sites Management Activities Complete (SMAC) policy.

This means that the SMS has determined the following:

- ☐ the source of the contamination at this site is believed to be from small surface spillage and has been adequately characterized;
- ☐ the site does not poses an unreasonable risk to human health or the environment;
- ☐ sampling of groundwater does not show any impacts on groundwater under the site.

Based on these findings, the site has been assigned a Site Management Activities Completed (SMAC) designation. Sites which the Waste Management Division has determined require no further management are classified as SMAC. This designation does not release Earth Waste Systems, Inc. from any past or future liability which may arise from any contamination which is believed to have originated from small spills at this site. It does mean that the SMS is not requiring any additional work be performed at this site in response to the contamination identified in 1997. If any additional information comes to light in the future, then the SMS may reconsider this determination.
